Linear Unit MTV 65

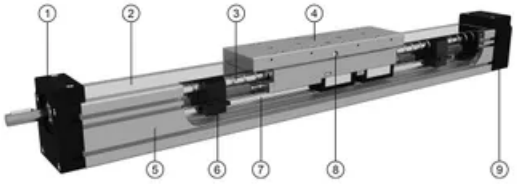
The MTV series describes linear units with precision ball screw drive, integrated guide rail and compact dimensions. The units use a precision ball screw, with tolerance class ISO7 (ISO5 on request), with reduced backlash of the ball nut. A corrosion-resistant protection strip, protects all the parts in the profile from dust and other contaminants.

To achieve higher speeds at the same stroke of the linear unit, the ball screw support system can be integrated. With this feature vibrations and deflections of the ball screw are reduced, therefore longer strokes are possible. The linear unit with integrated support system can have a higher axial load capacity. Ball screw supports are made of high quality plastic materials with high wear resistance properties. The system enables ball screw support in horizontal or vertical positioning of the linear unit.

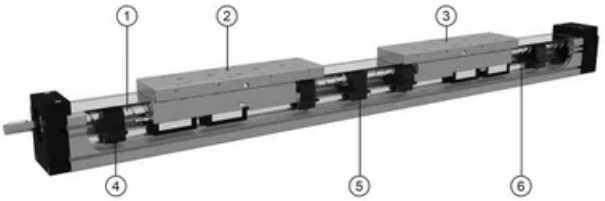
A 2LR version of MTV linear unit is available, where two carriages are moving simultaneously in opposite directions. Both right- and left-handed precision ball screws are used, which are rigidly connected. The ball screw support system can also be integrated.

Dimensions in mm.

Modulus of Elasticity: E = 70000 N / mm2
Operating Temperature (°C): 0 ~ +60 For operating temperature out of the presented range, please contact Rollco.
Duty Cycle: 100%
Max. Acceleration (m/s²): 20



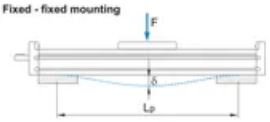
1. Drive block with floating bearing (MTV 110 - fixed bearing)
2. Corrosion-resistant protection strip
3. Ball screw tolerance ISO7 (ISO5 available on request)
4. Carriage with built in magnets
5. Aluminium profile - hard anodized
6. Screw support - SA
7. Integrated linear ball guideway
8. Central lubrication port, both sides
9. End block with fixed bearing (MTV 110 - floating bearing)



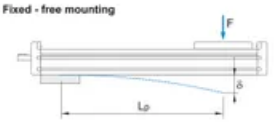
1. Right hand ball screw
2. Carriage with built in right hand ball nut
3. Carriage with built in left hand ball nut
4. Screw support - SA
5. Central screw support - fixed
6. Left hand ball screw

Deflection of the linear unit (standard)

Fixed - fixed mounting



Fixed - free mounting

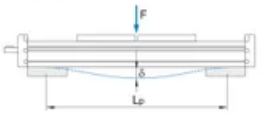


δ Maximum deflection of the linear unit [mm]
δmax Maximum permissible deflection of the linear unit [mm]
F Applied force [N]
Lp Unsupported profile length [mm]

The maximum permissible deflection δmax must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δmax additional profile supports are needed.

Deflection of the 2LR version

Fixed - fixed mounting



δ Maximum deflection of the linear unit [mm]
δmax Maximum permissible deflection of the linear unit [mm]
F Applied force [N]
Lp Unsupported profile length [mm]

The maximum permissible deflection δmax must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δmax additional profile supports are needed.

Mounting the drive

- by the **MOTOR SIDE DRIVE - MSD**
- by the **MOTOR ADAPTER WITH COUPLING**

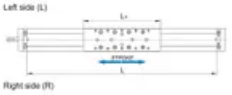
Defining of the linear unit length

Standard version

L = Effective stroke + 2 × Safety stroke + Lv + 2 × Lsa

Ltotal = L + 48 mm

Lv = 220 mm

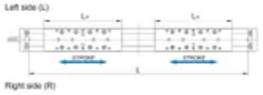


Version 2LR

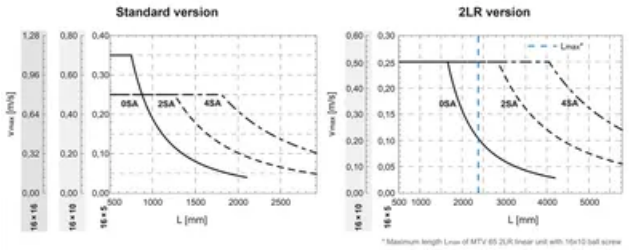
L = 2 × (Effective stroke + 2 × Safety stroke) + 2 × Lv + 2 × Lsa + Lca

Ltotal = L + 48 mm

Lv = 220 mm



Maximum travel speed as a function of the profile length (vmax - L curves)



* Maximum length Lmax of MTV 65 2LR linear unit with 16x10 ball screw

Exceptions for standard version

Linear Unit	Number of SA nSA	Max length Lmax (mm)	Max stroke (mm)
MTV65	0	2100	1870

Stated values in the table apply only for horizontally orientated unit.

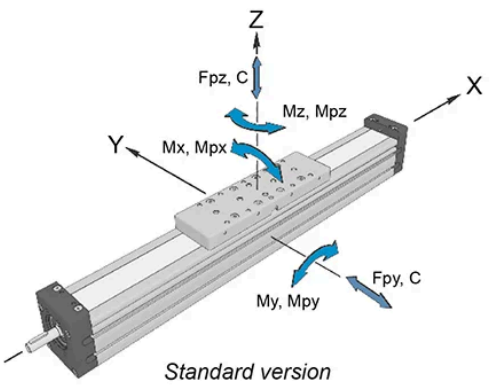
Exceptions for 2LR version

Linear Unit	Number of SA nSA	Max length Lmax (mm)	Max stroke (mm)
MTV65 2LR	0	4195	1870

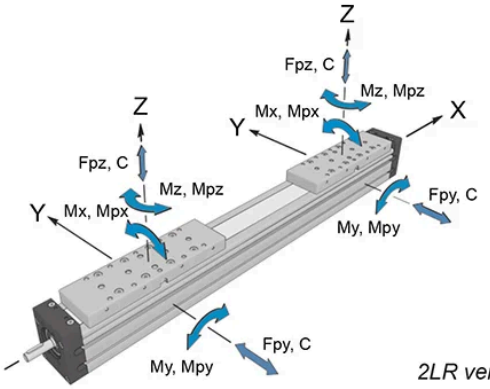
Linear Unit	Ball screw (d x l)	Max length Lmax (mm)	Max stroke (mm)
MTV65 2LR	16 X 10	2379	962

Exceptions for maximum length and strokel

General Data



Standard version



2LR version

For lengths/stroke over the stated value please contact us. Values for max. stroke are not valid for screw support SA. For the case of the SA the equation of defining the linear unit length (for particular size of the linear units) needs to be used.

Recommended values of loads

All the data of static and dynamic moments and load capacities are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety. We recommend a minimum safety factor (fs =5.0).

Designation	Carriage Length Lv (mm)	Dynamic Load Capacity C (N)	Static Load Capacity C0 (N)	Dynamic Moment Mx (Nm)	Dynamic Moment My (Nm)

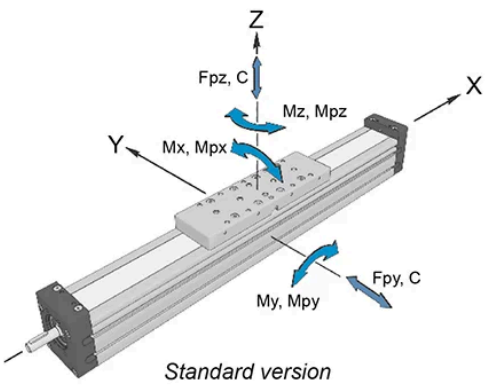
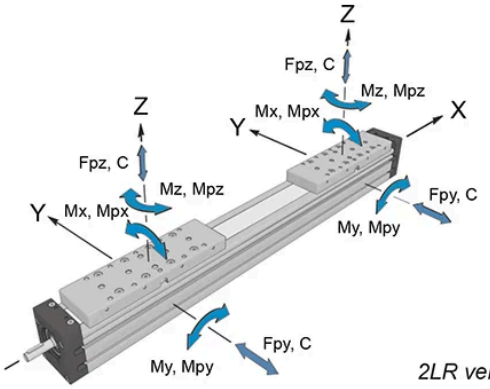
Drive Data



Standard version



2LR version

- With SA or 2LR version the max. rotation speed is limited to 3000 rev/min.
- Max. travel speed depends of the length of the linear unit, see diagram for particular size of the linear unit. For travel speed over the stated value, please contact Rollco.
- For the ball nut with the preload of 2%, please contact Rollco.
- In the case of 2RL version the axial load is total axial load of both carriages.
- For minimum stroke below the stated value, please contact Rollco.

Max. acceleration (m/s2): 20*

For acceleration over the stated value, please contact Rollco.

Reduced effective diameter at journal with keyway decreases values of max. drive torque.
